                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             * NOTE: This is a 'working draft' sequence. It currently consists of 5 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Insert size: -, agarose-fp

Sequence 9, Application US/09329418

Patent No. 609539

GENERAL INFORMATION:
APPLICANT: ERECA Limited

TITLE OF INVENTION: PROTEIN ACTIVATOR OF APOPTOSIS
FILE REFERENCE: PHH.70336

CURRENT APPLICATION NUMBER: US/09/339,418

CURRENT FILING DATE: 1999-06-11

NUMBER OF SEQ ID NOS: 39

SETWARE: FRATSEQ for Windows Version 3.0

ENGINE 518
TYPE: PAT
ORGANISM: Artificial Sequence
FEATURE:
OTHER INFORMATION: Dominant Negative Mutant Embodiment

Sequence 8, Application US/09329418
Patent NO. 6096539
GENERAL INFORMATION:
APPLICANT: ZENECA Limited
TIPLE OF INVENTION: PROTEIN ACTIVATOR OF APOPTOSIS
PILE REPERBURGE: PHM.70536
CURRENT APPLICATION NOTHER: US/09/329,418
CURRENT FILING DATE: 1999-06-11
NUMBER OF SEQ ID NOS: 39
SOPTWARE: FASTSEQ for Windows Version 3.0
SEQ ID NO 8
LENGTH: 420
ORGANISH: Artificial Sequence

Patent No. 6096539
GENERAL INFORMATION:
APPLICANT: ZENECA Limited
TITLE OF INVENTION: PROTEIN ACTIVATOR OF APOPTOSIS
FILE REFERENCE: PHM. 70536
CURRENT APPLICATION NUMBER: US/09/329,418
CURRENT FILING DATE: 1999-06-11
NUMBER OF SEQ ID NOS: 39
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 6
LENGTH: 261
TYPE: PRT
ORGANISM: Artificial Sequence
PEATURE:
OTHER INFORMATION: Kinase Domain

Expression vectors comprising the Apop DNA can be used to transform host cells. Apop DNA can be sedministered as DNA vaccines. Apop proteins are used to make polyclonal and monoclonal antibodies for use in immunotherapy. The proteins are useful in treating apoptosis—mediated disorders including cancer, autoimmune disorders, sustained viral infection, inappropriate call loss and degenerative disorders. Drug candidates that affect Apop bloactivity are identified by acreening. The present sequence is bloactivity are identified by acreening. The present sequence is interacting protein also known as RIP3. This was identified using RIP(receptor interacting protein) as the bait protein employing the yeast two-hybrid screening system. Human Apop3 is expressed in heart, liver, pancreas, placente, and lung. This is associated with the TNFalpha (tumour necrosis factor) signalling complex and TNF induced NF (nuclear factor) kappas transcription factor activation. Overexpression of Apop3 inhibits
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        06-AUG-1998;

용
                                                                                            The patent discloses the use of novel apoptotic proteins and related CC molecules involved in apoptosis modulation. Expression vectors comprising the Apop DNA can be used to transform host cells. Apop DNA can be used to transform host cells. Apop DNA can be used to transform host cells. Apop DNA can be used to transform host cells. Apop DNA can be administered as DNA vaccines. Apop proteins are used to make CC polycional and monoclonal antibodies for use in immunotherapy. The CC proteins are useful in treating apoptosis mediated disorders procluding cell loss and degenerative disorders. Drug candidates that affect Apop Disorderivity are identified by screening. The present sequence is a CC protein. This was used to demonstrate Apop Xinase activity and the activation of cellular caspases by Apop3. The Apop3 XDD mutant lost the CC kinase activity but was still able to activate the caspase activity successful castivation and cell death.

CC Note: The present sequence is not given in the specification but is CC derived from Apop3 protein (AAY45042).

Apoptosis is needed to orchestrate biological maintenance of an organism during development as well as to preserve the normal function and fitness of tissues during a normal life span. Physiological conditions which result from aberrant apoptosis may be dire. Cencer and autoimmune disease may result when there is too little apoptosis as well as severe stroke damage or the neurodegeneration of Alzheimer's disease when there is too much apoptosis. The ROD polypeptide is useful for studying pathophysiological disorders related to apoptosis as well as for identifying compounds that modulate biological and/or pharmacological activity of the native mediator of apoptosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to human protein activator of apoptosis and methods to identify compounds that modulate the biological and/or pharmacological activity of the activator and hence regulate apoptosis. The nucleic acid and amino acid sequences of the kinase of death (KOD) are useful for identifying compounds that modulate the biological and/or pharmacological activity of a native mediator of apoptosis, for treating dysfunctional apoptosis conditions, in screening assays to identify agonists which agonise or mimic biological and/or pharmacological activity, induce production of or prolong the biological half-life of the molecule in vivo or in vitro the present sequence is human KOD protein activator of apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Key

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  & . 함
                                           The kinase of death (ROD) polypeptide is integral to the activation of process of cellular apoptosis (programmed cell death). Apoptosis is needed to orchestrate biological maintenance of an organism during development as well as to preserve the normal function and fitness of tissues during a normal life span. Physiological conditions which result from abbrrant apoptosis may be dire. Cancer and autoimmune disease may result when there is too little apoptosis as well as severe stroke damage or the neurodegeneration of Alzhemer's disease when there is too much apoptosis. The KOD polypeptide is useful for studying pathophysiological disorders related to apoptosis as well as for identifying compounds that modulate biological and/or pharmacological activity of the native mediator of apoptosis. This KOD dominant negative mutant sequence differs from the wild type KOD (AABO1524) by having lysine at position 50 (ATP binding site) replaced by arginine.

The nucleic acid and amino acid sequences of the kinase of death (KOD) are useful for identifying compounds that modulate the biological and/or pharmacological activity of a native mediator of apoptosis, for treating dysfunctional apoptosis conditions, in screening assays to identify agonists which agonise or mimic biological and/or pharmacological activity, induce production of or prolong the biological half-life of the molecule in vivo or in vitro The present sequence is a dominant negative mutant of human KOD protein activator of apoptosis. The lysine at position 50 of native KOD is changed to arginine in the mutant sequence.

The kinase of death (KOD) polypeptide is integral to the activation of process of cellular apoptosis (programmed cell death). Apoptosis is needed to orchestrate biological maintenance of an organism during development as well as to preserve the normal function and fitness of tissues during a normal life span. Physiological conditions which result from aberrant apoptosis may be dire. Cancer and autoimmune disease may result when there is too little apoptosis as well as severe stroke damage or the neurodegeneration of Alzheimer's disease when there is too much apoptosis. The KOD polypeptide is useful for studying pathophysiological disorders related to apoptosis as well as for identifying compounds that modulate biological and/or pharmacological activity of the native mediator of apoptosis. This KOD dominant negative mutant sequence differs from the wild type KOD (AABO1524) by having alanine at position 142 instead of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          문
                                                                                                                                                                                                 The invention relates to human protein activator of apoptosis and commended to identify compounds that modulate the biological and/or pharmacological activity of the activator and hence regulate of death (KOD) are useful for identifying compounds that modulate the biological and/or pharmacological activity of a native mediator of apoptosis, for treating dysfunctional apoptosis conditions, in screening assays to identify agonists which agonise or mimic biological and/or pharmacological sctivity, induce production of or biological and/or pharmacological activity, induce production of or protein sequence is a dominant negative mutant of human KOD protein activator of apoptosis. The aspartic acid at position 143 of native KOD is changed to alanine in the mutant sequence.

Note: Column 11 of this specification describes that mutation occurs at position Asp143 of native KOD. But Asp is at position 142 in the mative KOD sequence shown in sequence listing.

The kinase of death (KOD) polypeptide is integral to the activation process of cellular apoptosis (programmed cell death). Apoptosis is needed to orchestrate biological maintenance of an organism during development as well as to preserve the normal function and fitness of tissues during a normal life span. Physiological conditions which result from aberrant apoptosis may be dire. Cancer and autoimmune

The KOD polypeptide is useful for studying pathophysiological disorders related to apoptosis as well as for identifying compounds that modulate biological and/or pharmacological activity of the native mediator of apoptosis. This KOD dominant negative mutant sequence differs from the wild type KOD (AABO1524) by having both tryptophan residues at positions 435 and 478 replaced by alanine.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          apoptosis. The nucleic acid and amino acid sequences of the kinase of death (KOD) are useful for identifying compounds that modulate the biological and/or pharmacological activity of a native mediator of apoptosis, for treating dysfunctional apoptosis conditions, in screening assays to identify agonists which agonise or minic biological and/or pharmacological activity, induce production of or prolong the biological half-life of the molecule in vivo or in vitro. The present sequence is a dominant negative mutant of human KOD protein activator of apoptosis. The tryptophans at positions 435 and 478 of native KOD are changed to alanine in the mutant sequence. Note: Column 12 of this specification describes that mutation occurs at positions Trp335 and Trp478 of native KOD. But Trp are at positions 434 and 477. In the native KOD sequence shown in sequence listing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to human protein activator of apoptosis and methods to identify compounds that modulate the biological and/or pharmacological activity of the activator and hence regulate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New human protein activator protein, useful for treating dysfunctional apoptosis conditions and in screening assays to identify agonists which agonize or mimic biological and/or pharmacological activity -

The proteins are from new human genes termed hi2832, hi4138, hi4833, hi5990, hi5993, hi6341 and hi223. The proteins may be used to identify modulators of their activity. The proteins may also be used to derive products for the treatment of cellular growth related disorders, malignancies, cancers, immune, inflammatory, respiratory, haematological and bone-related disorders.

The present sequence represents a human regulator of intracellular phosphorylation (HRIP). HRIP is useful for screening agonists and antagonists of HRIP polypeptide. HRIP and its agonist or antagonist of are useful for treating a disease or condition associated with care useful for treating a disease or condition associated with conditional HRIP. Diseases treated or disgnosed include neurological disorders such as stroke, Parkinson's disease, demyelinating diseases, bacterial and viral meningitis and cother developmental disorders of the central nervous system, neuromuscular disorders, myasthenia gravis, cell proliferative disorders such as actinic keratosis, arteriosclerosis, atherosclerosis and cancer including leukaemia, melanoma, myeloma and cancer of the adrenal gland, bladder, bone, bone marrow, liver, lung, muscle, ovary, autoimmune/ inflammatory disorder such as Addison's disease, acquired immunodeficiency disorder such as Addison's disease, acquired rheumatoid arthritis, microbial infection and trauma.

The patent discloses the use of novel apoptotic proteins and related molecules involved in apoptosis modulation. Expression vectors comprising the Apop DNA can be used to transform host cells. Apop DNA can be administered as DNA vaccines. Apop proteins are used to make polyclonal and monoclonal antibodies for use in immunotherapy. The proteins are useful in treating apoptosis-mediated disorders including

Drug candidates that affect Apop bioactivity are identified by screening. The present sequence is a truncation mutant of Apop3 (82-518) protein, also known as RIP3 (receptor-interacting protein). This was used in experiments to demonstrate activation of cellular caspases and NF kappaB (Nuclear factor kappaB). This N-terminal deletion mutant was able to activate caspase activity and induced higher luciferase activity than full length Apop3. The results indicated that Apop3's kinase activity is not required for caspase activation. NF kappa B activation and cell death. Note: The present sequence is not given in the specification but is derived from Apop3 protein (AAY45042).
                                                                                            Apop3 truncation mutant; Apop3 protein; apoptotic protein; cytost immunotherapy; RIP3; receptor-interacting protein; apoptosis modul apoptosis-mediated disorder; TNFalpha-induced caspase activation; cancer; autoimmune disorder; cytostatic; degenerative disorder; viral infection; cell loss; inhibitor of apoptosis protein; IAP; TNFalpha signalling complex; tumour necrosis factor.
                                                                                                                                                                                                                                                                                                                              31-MAY-2000
                                                                                                                                                                                                                                                                                                                                                                               AAY45043;

The patent discloses the use of novel apoptotic proteins and related comprising the Apop DNA can be used to transform host cells. Apop DNA can be used to transform host cells. Apop DNA can be used to transform host cells. Apop DNA can be administered as DNA vaccines. Apop proteins are used to make polyclonal and monoclonal antibodies for use in immunotherapy. The proteins are useful in treating apoptosis-mediated disorders including concer, autoimmune disorders, sustained viral infection, inappropriate cencer, autoimmune disorders, sustained viral infection, inappropriate cencer, autoimmune disorders, sustained viral infection, inappropriate cencer, autoimmune disorders, sustained viral infection, inappropriate cell loss and degenerative disorders. Drug candidates that affect Apop Cell loss and degenerative disorders. Drug candidates that affect Apop Cell receptor interacting protein). This mutent has dramatically reduced binding affinity for RIP and fails to induce apoptosis.

Apop 3 (1-436) inhibited TNFalpha-induced caspase activation, Apol is associated with the TNFalpha (tumour necrosis factor) signalling complex and TNF induced NF (nuclear factor) kappaB transcription factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                 The kinase of death (KOD) polypeptide is integral to the activation corrected to orchestrate biological maintenance of an organism during clevelopment as well as to preserve the normal function and fitness of cellular apoptosis as to preserve the normal function and fitness of tissues during a normal life span. Physiological conditions which cresult from aberrant apoptosis may be dire. Cancer and autoimmune disease may result when there is too little apoptosis as well as severe stroke damage or the neurodegeneration of Alzheimer's disease when there is too much apoptosis. The KOD polypeptide is useful for studying pathophysiological disorders related to apoptosis as well as for identifying compounds that modulate biological and/or pharmacological activity of the native mediator of apoptosis.

In controlled tests, destruction of the kinase active, ATP binding site or removal of the whole kinase domain has no effect on the killing rate of KOD. However, loss of the death domain removes the control of activity of the whole kinase domain because the control of KOD.

               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score
